

# Uniweigher X

The most innovative weighbridge ever manufactured, now as an Export.

## Technical Description

Exporting weighbridges used to involve moving long, wide loads weighing up to 12 Tonnes from our factories to remote destinations around the world.

Supplying the weighbridges would incur significant costs in shipping, transport and obtaining heavy lift equipment at the point of installation.

**Not any more !!!!**

Our new range of containerised weighbridges are built on a modular basis in easy to handle sections weighing no more than 2.5 Tonnes each.

A single 18M x 3M 100 Tonne capacity weighbridge with steel ramps can now be shipped anywhere in the world in a standard 20' container or 2 in a 40' container.

Unloading, installation and assembly can easily be achieved with a standard forklift !!!!

**How easy is that ????**

Think these weighbridges are going to be expensive?

**Think again !!!!**

Our prices are the most competitive.
